Getting Started

The first step to learning InDesign is to create a new document. To do this, click on the "File" menu and select "New". In the "New Document" dialog

- **Document Size:** The size of your document in pixels or inches.
- **Page Orientation:** The orientation of your document, either portrait or landscape.

- **Margins:** The amount of space around the edges of your pages.

Once you have specified these settings, click on the "OK" button to create your new document.

Working with Text

InDesign is a powerful word processor, and it can be used to create and edit text of all kinds. To add text to your document, click on the "Type" tool in the Tools panel and then click on the page where you want to add text.

A text frame will appear on the page. You can then begin typing your text into the frame. To format your text, use the options in the Character panel and Paragraph panel.

Working with Images

InDesign can be used to add and manipulate images of all kinds. To add an image to your document, click on the "File" menu and select "Place". In the "Place" dialog box, navigate to the image file you want to add and then click on the "Open" button.

The image will be added to your document. You can then resize and position the image as needed. To crop an image, use the Crop tool in the

Tools panel.

Exporting Your Project

Once you have finished creating your document, you will need to export it in a format that can be used for printing or publishing. To do this, click on the "File" menu and select "Export". In the "Export" dialog box, you will need to specify the following settings:

- **Format:** The file format you want to export your document to, such as PDF, JPEG, or EPS.
- **Quality:** The quality of the exported file, from low to high.
- **Page Range:** The pages you want to export, such as all pages or a specific range.

Once you have specified these settings, click on the "Export" button to export your document.
